EDUCATION

Purdue University - Fort Wayne | Fort Wayne, IN
Bachelor of Science in Computer Science | Minor: Information Technology | August 2022 - December 2026
Relevant Coursework: Data Structures and Algorithms, Software Engineering, Computer Networks, Web Development

TECHNICAL SKILLS

Programming Languages: Java, C/C++, Python, JavaScript, TypeScript, SQL
Frameworks & Web: React, Next.js, Node.js, HTML, CSS
Tools & Platforms: AWS (EC2, S3), Docker, Git, GitLab, GitHub, Vercel, Netlify, Jira
Testing & Security: Jest, Jasmine, Wireshark
Databases: PostgreSQL, MySQL, DynamoDB

WORK EXPERIENCE

Juvare | Fort Wayne, IN
Full Stack Development Intern | *May 2026 – Present*

- Building JXS Collaborate, a production feature enabling Juvare Exchange clients to securely share real-time emergency data with external organizations such as NGOs, fire departments, and government agencies through a controlled read-only portal
- Designed and implemented core data entities and permission structures following established company architecture conventions, supporting a three-tier access model across platform admins, client admins, and external organizations.
- Developed a standalone onboarding experience in React/TypeScript for external users joining via email invitation, adhering to internal UI and theming standards.
- Wrote unit and integration tests using Jest, consistently achieving a 95%+ pass rate across all implemented features.

Best Buy | Lansing, IL
Geek Squad Technical Consultant | *May 2023 – Jan 2026*

- Diagnosed and resolved hardware/software issues across Windows and macOS systems for 10+ clients daily.
- Provided technical support and technology recommendations to customers, translating complex technical concepts to clear, actionable solutions.
- Installed and configured home and small-business networks, improving performance and reliability.
- Automated routine troubleshooting steps using scripts and documented workflows.

PROJECTS

Level-Up Meds Web Application (Next.js, AWS, DynamoDB) ~ Capstone Project | LIVE DEMO
Collaborated in a team of 4 students and worked alongside industry interns to develop a full-stack web application as part of a year-long capstone initiative.

- Redesigned the dashboard and chat interface with a caregiver-first UX, delivering features including medication overviews, message pinning, reactions, editing, and deletion.
- Built and owned a caregiver communication system and fully functional notification pipeline end-to-end, from delivery logic through a dedicated notifications page.
- Updated the application data schema and collaborated closely with backend services to ensure frontend features aligned with API contracts and data models.
- Delivered features end-to-end in an Agile environment — from initial requirements through implementation, validated in an isolated AWS testing branch, and deployed to production.

Algorithm Visualizer (React.js) | GITHUB REPO
Engineered an education web application that visualizes sorting algorithms.

- Built a Single Page Application (SPA) using React with component-based architecture and state-driven UI updates.
- Implemented interactive visualizations with a focus on performance, responsiveness, and user experience.
- Added user controls for algorithm speed, array size, and reset behavior to improve interactivity and learning outcomes.
- Managed dependencies and build tools using Node.js for development and deployment.

RoleScan (Python, NLP, CLI) | GITHUB REPO
Developed a Python command-line tool that analyzes job descriptions using NLP to extract required skills, role focus, and keyword insights to help users tailor resumes effectively.

- Built a modern CLI using Typer with structured and user-friendly terminal output powered by Rich.
- Implemented natural language processing using NLTK to extract skills, filter stop words, and identify relevant keywords.
- Designed structured data models with Pydantic for clean parsing, validation, and JSON/Markdown export.
- Automated analysis of job postings to classify role focus (Frontend, Backend, Full-Stack, Data) and surface actionable insights.

ACTIVITIES

Robotics Club | Fort Wayne, IN

- Analyzed sensor data to improve robot navigation efficiency during competition trials.
- Documented configuration management and testing results for performance evaluation.
- Collaborated with team members to implement system improvements.
- Contributed to the development and refinement of control logic and automation routines for autonomous robot operations.
